The result is a video that loops in the place of your choice. The result is a supercharged video. Coub also will convert your video into the four most popular video formats: MP4, AVI, MOV, FLV. Please note the original video file must be renamed to

end with a.mp4 or.flv extension to play on the Coub site. in the case of NFEB-RasB compared to NFEB-RasA that could be explained by differences in the phosphorylation of SIN1 and SIN3 between NFEB-RasA and NFEB-RasB. In NFEB-RasA, SIN3 is mostly unphosphorylated, whereas in NFEB-RasB, it is strongly phosphorylated. In addition, the interaction of NFEB with SIN3 in the NFEB-RasB (T54) compared to NFEB-RasA (S4) might further explain the differences in their biological properties \[@B25-ijms-21-00344\]. The fact that both NFEB-RasA and NFEB-RasB can induce cell death \[@B19-ijms-21-00344\],\@B20-ijms-21-00344\],\@B21-ijms-21-00344\] suggests that the activation of MAPK is not essential for NFEB to exert its effect on cell death. In contrast to a recent study that showed that NFEB can induce cell death in cells with defective nuclei and a weakened NFEB, independent of the mitogen activated kinase/ERK pathway \[@B26-ijms-21-00344\], we demonstrated that MAPK activity is essential for NFEB to induce cell death. However, NFEB might activate MAPK in a subset of cells. In our model, NFEB-RasB induced more intense staining for pERK than NFEB-RasA, but NFEB-RasA and NFEB-RasB induced the same number of cell death in HEK293 cells. The observed differences between NFEB-RasA and NFEB-RasB could be due to the differential phosphorylation of SIN3 between NFEB-RasA and NFE
